

# **The Rollin Becker Memorial Lecture**

Saturday, 27<sup>th</sup> November 2004 at 5.30pm  
Cavendish Conference Centre,  
22 Duchess Mews, London, W1G 9DT

given by

**Colin I. Dove, DO, MSCC**

## **‘TOWARDS A NEW THEORY’**

Those of us who have extended our osteopathy into the cranial field know that Sutherland’s theory; good as it is in very many respects, has weaknesses. We have made observations and found information, which though highly relevant does not fit comfortably into the original theory. Both Still and Sutherland urged us to “dig on” - perhaps it is time to do their bidding.

Throughout the 20<sup>th</sup> century, work in the field of quantum physics has produced some fascinating theories about how the universe and more particularly how our world works. This is now having a major impact on how we view biological systems. In this lecture Colin Dove explores these ideas to see if they might provide the basis for a new theory for osteopathy.

Currently celebrating his thirtieth year as a teacher of Osteopathy in the Cranial Field, this is the perfect time for Colin to give the Rollin Becker Memorial Lecture.
